### India

Our activities in India are dated back since 2001. Project was financed by the Ministry of the Environment of the Czech Republic within its Official Development Assistance (ODA) programme. Project has been focused on awareness raising in the area of environmental technologies, i.e. technologies with considerably lower impact on environment than conventional technologies in use in the country. Basically all activities have been focused on environmental technologies in the wastewater treatment area, both municipal and industrial. Two technologies have been installed in India within the project, first focused on treatment and recycling of municipal waste waters and the other on recycling of oiled waste waters from car washing. Generally, potential for our technologies is vast in India, on the other hand the real acceptance is slow due to lack of environmental legislation and bureaucracy.

Supported by the Ministry of Environment of  
the Czech Republic within the Official  
Development Assistance

## IMPROVEMENT INNOVATION IRCON

India—installation of small waste water treatment plant TOPAS in New Delhi

India—seminar for Housing and Urban Development Corporation (HUDCO) on decentralized wastewater treatment in New Delhi

India—installation of wastewater recycling unit for oiled wastewaters from car washing, operations, New Delhi

India—detail of wastewater treatment plant during installation, New Delhi

India—training of locals in assembly and putting into operation of a small wastewater treatment plant TOPAS, New Delhi
